Cloud Control

Discover the simple way of purchasing and managing cloud

Trustmarque's Cloud-ESP is a one stop shop to manage and procure your Microsoft cloud products and services all in one place. It has been specially designed for the era of cloud computing and digital transformation.

Cloud-ESP

Control Costs
No more multi-year contracts or daunting up-front fees, you can now reduce risk and control your cloud costs through a Pay-As-You-Go (PAYG) model – simple, flexible and accessible technology.

Fine Tune IT Security across the Whole Organisation
Simplified security, usage and admin of your cloud across the whole organisation with single sign-on, supporting organisational Active Directory accounts integrated to Azure AD, providing password security and a seamless user experience.

View and Track Cloud Spend Instantly
A dashboard view provides instant visibility of your cloud consumption and license usage. Monitor your peak spend periods for greater financial reporting and management, manage automated spend notifications enabling the true scalability and flexibility of cloud, identify unallocated licenses to reduce compliance risks and track spend by department, environment and project.

Access Supported Services
Access to a range of services that can be provisioned in hours not weeks. Support for services is also straightforward with online access to our 24/7/365 service desk and managed service capabilities.

"The Scottish Parliament has recently adopted Azure for development, test and production environments. We had difficulty understanding the component parts of the spend beyond total spend by week. The Trustmarque Cloud-ESP has changed that, giving us absolute insight into the spend associated with particular workloads and components, giving us more confidence to adopt Azure as our Cloud platform."
Stuart Nicol, Head of Business Applications, The Scottish Parliament

Using the power of cloud, we've designed a range of packaged managed services to scale on-demand. The support for these services is straightforward with online access to our 24/7/365 service desk and managed service capabilities.

Azure on Demand

For many organisations the initial adoption of Azure can appear; complex, costly and can represent a big change for the business. Trustmarque's Azure on-demand service removes uncertainty and gives organisations more control over their IT.

Disaster Recovery as a Service

Unexpected disruptions can have far reaching effects on an organisation; the impact on your service levels can leave you unable to meet your customers' needs, and service outages can render you non-compliant with industry or government regulations.

At Trustmarque we simplify Disaster Recovery for your organisation. With our Disaster Recovery as a Service (DRaaS) we remove the complexity and cost of procuring, operating and maintaining a secondary datacentre.

Back-up as a Service

The importance of resilient technology is understated when it comes to your data, maintaining systems that cannot meet your policies, requirements and timeframes represents a significant risk to your business. Trustmarque provide a simple and reliable cloud integrated backup solution contributing to business continuity and disaster recovery, a solution that protects your data and your applications on your on-premises servers and virtual machines.

VM Management

Transforming the business with cloud technology is top of the CIO's agenda, but the ongoing management, maintenance and optimisation is a significant distraction for most IT departments. Trustmarque's VM management services are designed to overcome these challenges and ensure your organisation achieves maximum gains from Azure, focusing on adding value to your organisation rather than simply keeping the lights on.
